

Sunday and Monday Sept
Bosque Capatzenk Amm...

I asked where a really old
friend and was sent to
of Monaca Park Capatzenk
One old tree finished
The returned several times
The much of this ever
like its doing the splits
spread out opposite each other
but around as some of the young
from left to right not top, and it must
measure would be 60 or 70 feet up to tip
Maybe 150 tall? hard to tell

Frank me, I hear rattlers, chachals,
magpies and Killdeer lap the loudest sound is
constant clicking and clacking of grasshoppers.
I catch moment beside me of something lizard
and... its a tiny chipmunk - upon Calamita Capatzenk

and some
much into a
Circumference of this one
is about 20', using my spread arms
as a measure.

In the open old wood of 20
I can see granite rocks, flat
and larger wedged in the roots. En-
closed in the roots might be a better
description. How many hundreds of years
have they been in the grip of this tree's
spreading roots?

This tree has a Pteris-like plant
steeply broken marks in its bark, across
in the mass of its bark almost like rolls
of flesh. I wish I could be sitting
up in it, about on the second story.

was buried about among
underneath - even a very
small one sitting in a
place in the roots.

NEW MEXICO MUSEUM OF NATURAL HISTORY & SCIENCE PRESENTS

1801 MOUNTAIN ROAD NW
ALBUQUERQUE, NEW MEXICO

Drawing on Nature
